

TechSmith Relay

The higher education video platform you'll actually use!

TechSmith Relay is a cloud-based video creation, hosting, and engagement platform available for your entire organization!

With TechSmith Relay You Can...

1. Create videos on any device.

Use the TechSmith Relay Desktop Recorder to record anything on your computer screen or the TechSmith Fuse Mobile App on your smart phone or tablet to capture real world content.

2. Engage viewers with quizzes and assess learning outcomes with analytics.

Make your videos interactive by adding true/false, multiple choice, fill-in-the-blank, and open response questions. Viewing analytics allow you to see who's watching your videos and exactly how much content they're watching.

3. Upload and share videos via Your Learning Management System (LMS).

Upload your videos to the TechSmith Relay cloud; a secure hosting environment, specific to your organization. Embed your videos directly within your LMS courses. Quiz scores get reported directly into your LMS Gradebook.

4. Access and view videos anywhere, anytime on any device.

Videos can be accessed and viewed on any PC or mobile device. Our speech-to-text generator and robust caption editor allow you to add ADA compliant captions to any video, ensuring your media is accessible by everyone.
